Revised: 14 July, 2016

FOR END USER
Safety Considerations
Do not attempt to make repairs to this thermostat, contact owner.

General
Non-programmable heat pump two-speed fan operation thermostats are wall-mounted, low-voltage thermostats which maintain room temperature by controlling the operation of a heating and/or air conditioning system. A variety of features are provided including separate heating and cooling set points, auto or manual changeover, fan selection (high or low auto or continuous), keypad lockout, and backlighting.
No batteries required.

Thermostat On-Screen Indicators — The following on-screen indicators can be displayed on the thermostat display. See Fig. 2 for location of indicators.
• Fan mode - on (LO and HI) or auto (LO and HI) (1)
• Current temperature (2)
• Mode (3)
• Fahrenheit or Celsius units (4)
• Keypad is locked (no padlock means unlocked) (5)
• Auxiliary heat (not used with this thermostat) (6)
• Current set point (7)

Setting Heating and Cooling Temperatures — The thermostat is installed with the heating set at 68 F and the cooling set at 78 F. Perform the following procedure to change the temperature setting:
1. To change the heating temperature, press the mode button on the left until the screen displays “heat”.
2. Press the up or down button located on the right side of the display until the desired temperature is reached.
3. To change the cooling temperature, press the mode button on the left until the screen displays “cool”.
4. Press the up or down button located on the right side of the display until the desired temperature is reached.

Turning Heating and Cooling System Off — To use the thermostat to turn the heating and cooling system off, press the mode button until the display shows “off” in the upper left corner.

Using the Fan — Pressing the fan button cycles through the four selections; fan on LO, fan on HI, fan auto LO, and fan auto HI. The fan can operate continuously (fan ON) or cycle with compressor (auto fan).
Auto Changeover — The thermostat displays one of four modes: heat, cool, auto (heat cool) and off. When the mode selection is in auto mode, the system is allowed to switch from heating to cooling or from cooling to heating to maintain the temperature set points.

Locked Keypad — The thermostat is locked when the pad-lock symbol is shown on the thermostat display. A locked thermostat will inhibit making adjustments. Contact owner to unlock.

Power Outage — If the building loses electricity, the thermostat will not need to be reprogrammed. The settings are retained in memory.

Cleaning — Remove dust from top of thermostat. Clean with damp cloth. Do not use sprays.
