

WIRELESS SERVICE TOOL

DISCOVER ELEVATED SERVICEABILITY WITH OUR NEW WIRELESS SERVICE TOOL

Effortlessly monitor, manage and configure any ClimateMaster Water Source Heat Pump with an EXM, DXM2.5, or CXM2 control from up to 20 feet away using any Wi-Fi enabled device. The Wireless Service Tool provides technicians the ability to field configure products, access performance data, and set up systems with ease from the convenience of their Wi-Fi enabled device.

Wireless Service Tool Advantages

- Update settings for any ClimateMaster Water Source Heat Pump with ease.
- Performs all the functions of ClimateMaster's handheld service tool and more.
- Troubleshoot faults conveniently from a Wi-Fi enabled device.
- Assign the number of Refrigerant Detection System (RDS) sensors installed in the unit.
- View the refrigerant circuit with real-time temperature, pressure, and airflow readings included in the on-screen diagram.
- Remotely activate test mode and enable thermostat inputs for efficient troubleshooting.
- Capable of logging specific data points you select for comprehensive data analysis.
- No external power necessary for hassle-free operation.
- No Internet is required for enhanced privacy and security.

Simply connect the Wireless Service Tool to a port outside the unit or directly to the EXM, DXM2.5 or CXM2 control to enable mobile access.

Now the configuration control and the data you need is at your fingertips.
