What's New with ClimateMaster's Tranquility® 30 Digital?

ClimateMaster has invested years of experience, research and development into new technologies that set the Tranquility® 30 Digital systems apart from the rest by delivering higher cost savings, more reliability and unparalleled comfort.

High Efficiency = Low Operating Cost

The Tranquility® 30 Digital with vFlow® variable water flow technology breaks new ground in efficiency by approaching 30 EER part load cooling and 4.8 COP part load heating for ground loop applications. Leveraging the next generation Copeland scroll compressor, variable speed ECM motor, low-pressure-drop water-to-refrigerant heat exchanger and vFlow variable water flow technology, the Tranquility 30 has been optimized for maximum operating efficiency and the industry's lowest operating cost. The Hot-Water Generator further increases operating cost savings by pre-heating hot water for domestic use. Bottom-line, the Tranquility 30 delivers the industry's lowest operating cost.

iGate® 2—Communicating Controls

iGate® 2 technology represents the next generation in intelligent controls by using 2-way communication to provide a gateway into the system. The iGate 2 control system allows the homeowner and dealers to monitor the performance of the unit, custom tailor its operation, and diagnose any issues, all from the communicating thermostat.

The iGate 2 communications hub is the new DXM2.5 intelligent controller, which analyzes the status of sensors and smart components (also 2-way communicating) to determine how best to operate your system for optimal comfort, efficiency and long-term reliability. All of this information is passed to the iGate 2 thermostat (or dealer diagnostic tool), where it can be displayed in plain English. And since communication is both ways, the iGate 2 thermostat can also be used to configure and tailor the system without touching your unit.

Future accessories will enable iGate 2 communication over the internet, allowing the homeowner (and dealer if the homeowner chooses) to access the system from a PC or smart phone.

vFlow® Variable Water Flow

vFlow variable water flow technology is a major advance in geothermal system performance made possible through the iGate 2 system. vFlow not only builds the major water circulation components right into the unit for a faster and cleaner installation, it also intelligently varies the water flow to minimize pump energy consumption and improve the reliability of the system.

The heart of vFlow is either a variable-speed pump (for ground loops) or modulating water valve (for groundwater) directly linked into the iGate 2 system. Water flow is automatically varied based on changes in unit capacity level (stage) and source water temperature

to maintain optimum system performance.

vFlow systems reduce water pumping power consumption by 60–80% compared to traditional external pumping modules, which can save over \$100 per year in an average 2,000 square foot home. In addition, vFlow protects the unit against extreme operating conditions, extending the life of the compressor and air coil. Since vFlow is built right inside the unit, it also saves on installation time and makes for a very clean and compact installation.

Microchannel Air Heat Exchanger – The Next Generation in Air Coils

ClimateMaster also utilizes the Microchannel air heat exchanger on the 026 to 049 sizes in the Tranquility 30 Digital family. Microchannel aluminum heat exchangers offer higher heating efficiency and have been used for years in automotive applications. ClimateMaster is the first geothermal company to field test and use Microchannel Air Heat Exchangers.

ENERGY STAR® Most Efficient – Communicating AND Efficient

Tranquility 30 Digital has been recognized as Most Efficient by ENERGY STAR for exceeding stringent efficiency requirements AND for meeting smart communication requirements. With these systems the customer is getting an EFFICIENT system and an INTELLIGENT system—buying a system can't get SMARTER than that!

Easy to Install, Easy to Service—A Technician's Dream Machine

Installations are easier and quicker with Tranquility 30 Digital units with (1) vFlow built-in water flow vs. bulky external flow controllers / water flow components (2) iGate 2 system configuration (airflow, water ΔT, accessories) on the thermostat and (3) iGate 2 Manual Operation from thermostat at start up to verify proper operation.

Service is even easier with (1) iGate 2 Service Warning on the thermostat for homeowners to call the dealer with fault information (2) iGate 2 Service Mode for dealers to see conditions (temperature, flow, input/output, configuration) at the time of fault, for better, quicker diagnosis (3) Easy Access to components with swing-out control board, easy-access panels, refrigerant/ water pressure Schrader ports at the front of the unit.

ClimateMaster has designed and built the EASIEST geothermal unit to install and service, period.

Tranquility® 30 Digital (TE) Series

iGate® 2 Communicating Controls

iGate® 2 Information gateway to monitor, control and diagnose your system

The Tranquility® 30 Digital is equipped with industry-first, iGate® 2 – Information Gateway – a 2-way communicating system that allows users to interact with their geothermal system in plain English AND delivers improved reliability and efficiency by precisely controlling smart variable speed components. iGate 2 makes the Tranquility Digital series the easiest geothermal products to install and service.

Monitor/Configure

Installers can configure Tranquility 30 Digital units from the thermostat, including: Air flow, loop ΔT , water-flow option configuration, unit configuration, accessory configuration, and demand reduction (optional, to limit unit operation during peak times). Users can look up the current system status: temperature sensor readings and operational status of the blower and pump.

Precise Control

The new DXM2.5 board enables intelligent, 2-way communication between the DXM2.5 board and smart components like the communicating thermostat, fan motor, and water pump. The DXM2.5 control can also directly control the modulating valve and accepts various feedback/input. The Intelligent DXM2.5 board uses information received from the smart components and sensors to precisely control operation of the variable-speed fan and variable-speed water pump (or modulating valve) to deliver higher efficiency, reliability and increased comfort.

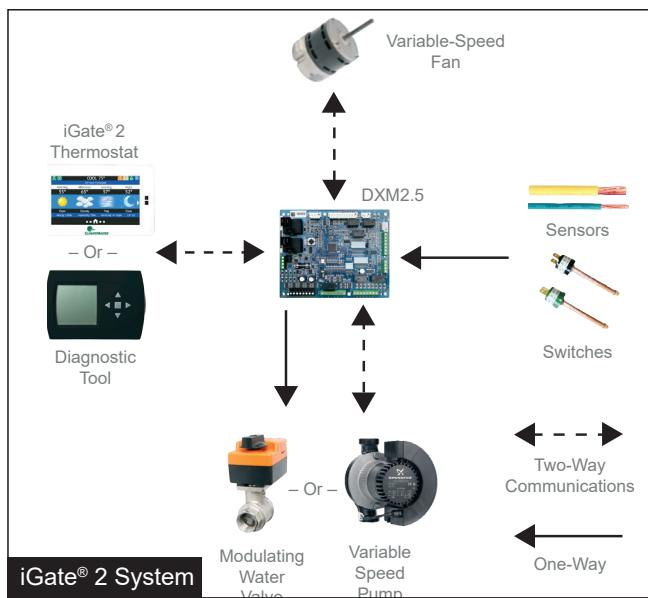

Diagnostics

iGate 2 takes diagnosing geothermal units to the next level of simplicity, by providing a dashboard of system and fault information, in plain English, on the iGate 2 thermostat/ service tool.

iGate 2 Service Warning warns the homeowner of a fault and displays dealer information (if programmed), fault descriptions, possible causes and current system status (temperature readings, fan RPM and water flow status) to provide to a dealer on the phone.

In iGate 2 Service Mode, the service personnel can access fault descriptions, possible causes and most importantly, the conditions (temp, flow, i/o conditions, configuration) at the time of the fault and at the time of the call. Manual Operation mode allows the service personnel to manually command operation for any of the thermostat outputs, blower speed, as well as pump speed or valve position from the thermostat, to help troubleshoot specific components.

With the iGate 2 communicating system, consumers and contractors have a gateway to system information never before available.

vFlow® Internal Variable Water Flow Control

vFlow® Internal Variable Water Flow

Industry-first, built-in vFlow® replaces a traditionally inefficient, external component of the geothermal system (water circulation) with an ultra-high-efficient, variable speed, internal water flow system. This saves homeowners 70-80% on operating water circulator vs traditional single speed pump systems. It saves installers time and labor by avoiding installing bulky external flow centers or flow regulators. Multi-unit installations are also much simpler with vFlow systems, as the units automatically adjust water flow across the system.

vFlow is enabled by iGate® 2, which facilitates intelligent communication between the thermostat, DXM2.5 control, sensors and internal water pump/valve to make true variable water flow a reality.

vFlow® is available for three applications:

- 1) Closed loop – individual unit pumping: vFlow Internal Flow Controller model "1" (standard head) or "2" (high head) ("2" in Position 11 of the unit model number) would be used. This includes variable speed pump, flushing ports, 3 way flushing valves and expansion tank. Copper water coil is standard with this option.
- 2) Closed loop – multi unit / central pumping: vFlow Internal Low Pressure Drop (high Cv) Motorized Modulating Valve ("5" in Position 11 of the unit model number) would be used. Copper water coil is standard with this option.
- 3) Open loop: vFlow Internal Motorized Modulating Valve ("6" in Position 11 of the unit model number) would be used. Cupro-Nickel water coil is standard with this option. Valves in open loop models have higher pressure drop than the valves in the closed loop (modulating valve) models for better flow control when used in systems with higher pressure water supply pumps, and are not recommended for closed loop applications.

vFlow® delivers three main benefits:

- 1) Easier and quicker unit installation as the flow control is built in to the unit.
- 2) Superior reliability by varying the water flow to deliver more stable operation.
- 3) Higher cost savings by varying the flow (and pump watt consumption) to match the unit's mode of operation.

Internal components

Tranquility® 30 can be installed more easily and compactly than its predecessors because water-flow components are internal to the unit. It also saves installing contractors labor and time by eliminating the need for an external flow regulator or a bulky external pumping module.

Variable flow

vFlow technology enables variable water flow through the unit, with the DXM2.5 control adjusting the pump speed to maintain an installer-set loop ΔT . By controlling the water flow, the system is able to operate at its optimal capacity and efficiency. vFlow provides a lower flow rate for part load where units typically operate 80% of the time and a higher, more normal flow rate for full load operation.

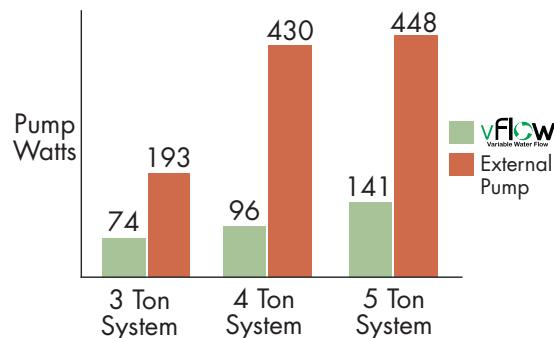

Variable speed pump or motorized modulating valve delivers variable water-flow, controlled by DXM2.5 control, based on loop water ΔT .

Energy Savings with water circulation control

Units with vFlow deliver higher operating cost savings by varying the water flow to match the unit's operation (ex: lower water flow when unit is in part load operation). Lowering the flow results in lower energy consumption by the water pump (=higher cost savings) in vFlow units (whether internal or external pump).

In closed loop applications, using vFlow with an internal variable-speed (ECM) flow controller, the ECM pump uses fewer watts than a fixed speed (PSC) pump, even at full load (see chart). The ECM pump excels in energy savings in part load, saving 70-80% watts compared to fixed speed pumps (see chart). The ECM pump can operate with independent flow rates for heating and cooling, further saving even more energy.

In open loop applications, when the motorized modulating valve slows down the water flow during part load operation, the external pump consumes fewer watts, thus saving more energy.

How to Use this Catalog

As with any unit selection the first step is to perform a proper load calculation. Once the design cooling and heating loads are known the predominant load can be used to select the appropriate unit. In northern climates the heating load may be used to select the unit, whereas in southern climates the cooling load may be used. Likewise, the anticipated maximum EWT should be used for the cooling mode and the minimum anticipated EWT should be used when selecting for the heating mode. These EWTs may be the same temperature in the case of a ground water application.

Use the Full Load performance pages to select the unit size. Once the unit size is determined read the associated flow rate (gpm) for the needed capacity. Typically this is 1.5 – 2 gpm/nominal ton for ground water applications and 2.25 – 3 gpm/ton for ground loop applications.

For Closed Loop Applications

For closed loop systems where an internal circulating pump is desired, the TE30 units can be ordered with an internal, variable speed loop circulator. This would typically be for a ground loop or secondary pumping application. The internal loop circulator is available in a high head version for all unit sizes and in a standard head version for unit sizes 026 and 038. Units with the standard head pump should not be combined with units with high head pumps on the same loop. Standard head pumps are best suited for small applications with a single unit. The maximum possible pump curve is shown in the tables below. The pumps can also operate at any point below the curve as a “partial load” pumping condition. The designer/installer should use the information presented in this catalog to determine the available pump head for any external piping/accessories and ground loop (if applicable). This can be done in the following manner.

1. Determine the desired flow rate through the TE30 from the performance pages (as described above). Read the associated pressure drop in feet of head for the worst case condition (lowest anticipated entering water temperature) at the required flow rate.
2. Determine the maximum pump head from the pump curve associated with the required flow rate from step 1.
3. Subtract the unit pressure drop (from step 1) from the maximum available pump head (from step 2).
4. The remainder is the available pump head to overcome any external piping/accessories and the ground loop.

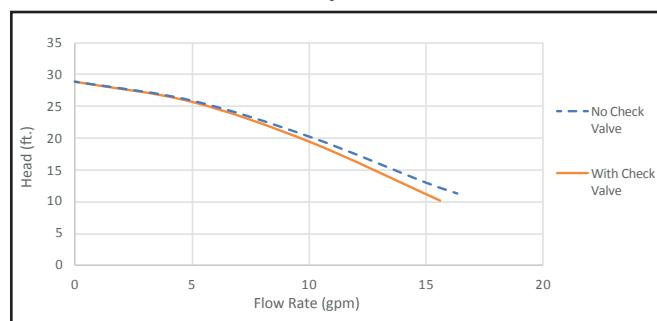

If the available pump head is equal to or greater than the calculated external piping and loop pressure drop, no other steps are required. If the available pump head is less than the calculated pressure drop of all external piping and the loop, then changes to the loop design should be considered.

Typically residential loops consist of 3/4" circuit piping and 1 1/4" supply and return piping. If the available pump head is less than the calculated pressure drop of all external piping and the loop, it is recommended that larger pipe sizes be investigated such as 1" circuit piping and/or 1 1/2" or 2" supply and return piping. This will significantly reduce system pressure drop with little change in Reynolds number. If this causes the Reynolds number to fall to an unacceptable level, try reducing the overall number of circuits. This will increase the flow rate through each circuit, increasing the Reynolds number.

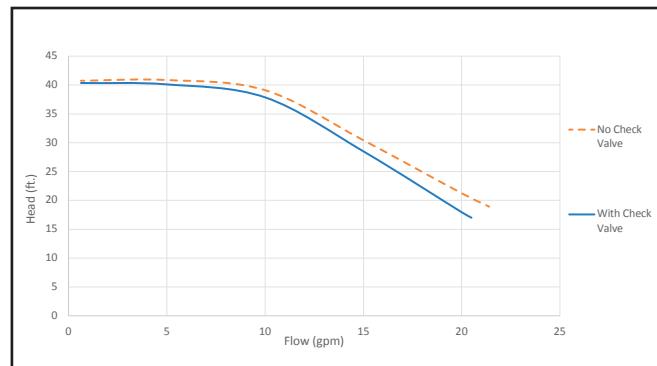

Another solution might be to allow the system flow rate to be reduced. Typical geothermal flow rates are between 2.25 and 3 gpm/ton. As long as the system flow rate using the internal variable speed circulator is at or above 2.25 gpm/ton it is safe to operate the system. A quick review of the unit performance tables will show that this causes very little change in unit performance.

ClimateMaster's Pressure Drop Software can be used in conjunction with the pump performance information presented here to determine actual flow rate when the internal circulator is not able to provide the desired design flow rate.

Standard Head Variable Pump

High Head Variable Pump

How to Use this Catalog

For secondary pumping applications follow the above steps except do not consider the pressure drop of the loop. The internal 25-140 circulator will only need to overcome the pressure drop of the unit and any piping connecting the unit to the primary loop.

The TE30 can also be ordered with an internal modulating water control valve for closed loop systems with multiple units and a central pump. In this case the modulating water valve will stop water flow through the unit when the unit is not operating and control the flow rate through the unit during operation, saving pumping energy in both cases.

When using an internal modulating water valve the central pump must be able to overcome the pressure drop of the valve in addition to the pressure drop of the unit. Because of this, internal modulating valves for closed loop systems are designed with a low pressure drop in mind. The minimum pressure drop for the internal closed loop valve is shown in the 'Modulating Valves for Closed Loop Applications' table below. This pressure drop should be added to the unit pressure drop when determining system pressure drop for central pump selection.

For Open Loop Applications

The TE30 can also be ordered with the internal modulating water control valve for open loop systems with an external well pump. In this case the modulating water valve will stop water flow through the unit when the unit is not operating and act as a flow control device to control the flow rate through the unit during operation.

When using an internal modulating water valve the external pump must be able to overcome the minimum pressure drop of the valve in addition to the pressure drop of the unit. The minimum pressure drop for the open loop internal valve is shown in the 'Modulating Valves for Open Loop Applications' table below. This pressure drop should be added to the unit pressure drop when determining overall equipment pressure drop.

Tranquility® 30 Digital (TE) Series

Tranquility® 30 Design Features

The Tranquility® 30 Digital Series has abundant features and ultra-high efficiency.

Application Flexibility

- Five Capacities 026, 038, 048, 064, and 072
- Entering water temperature operation range (20-120°F EWT) and flow rates as low as 1.5 gpm per ton
- Two-stage upflow, downflow, and horizontal right or left return
- Internal (upflow and downflow only) electric heat unit (optional) designed for easy field installation.
- Optional external (horizontal units) electric heat unit designed for easy field installation
- Field selectable low-temperature protection settings for GWHP or GLHP installations
- Standard pre-installed 2" filter frame with 2" high performance MERV 11 pleated air filter
- Optional Integrated vFlow® functionality for most geothermal applications

Operating Efficiencies

- Exceeds ASHRAE 90.1 and Energy Star Tier 3 efficiency levels
- Energy Star® Most Efficient
- EarthPure® HFC-410A zero ozone depletion refrigerant.
- Rugged and highly efficient next generation Copeland UltraTech™ 2-stage scroll compressors provide ultra-high efficiencies and unsurpassed comfort.
- Optional hot water generator with advanced control logic and internally mounted pump.
- Oversized coaxial tube water-to-refrigerant heat exchangers operate at low liquid pressure drop. Convoluted copper (and optional cupro-nickel) water tube functions efficiently at low-flow rates and provides low-temperature-damage resistance.
- Oversized tin plated, rifled tube/lanced aluminum fin, air to refrigerant heat exchangers provide high efficiency at low face velocity (064 and 072)
- Next generation all aluminum microchannel air coil (026, 038, 049) for high efficiency
- Large low RPM blowers with variable speed ECM fan motors provide quiet, efficient air movement with high static capability. Installer selectable ECM air flow provides the ultimate in comfort optimization.

Service & Installation Advantages

ClimateMaster's Tranquility® 30 Digital series incorporates features that are industry firsts, which make it extremely easy to install:

- Ease of installation:
 - 1) vFlow® - with the industry exclusive features, these units are ready to install out of the box with no requirement for external pumps, expansion tanks, or valves for the ground loop removing a lot of the complexity of installation.
 - 2) Full digital controls that communicate with the thermostat which allows all unit configuration from the thermostat...the easiest installation setup for any level of installer. Far simpler than the use of dip-switches on the unit control board.
- Tranquility® 30 only requires 4 wires between the communicating thermostat and the unit. Others require up to 9 or 14 wires for full functionality. This is achieved by leveraging the full power of the microprocessor on the control.
- Internal variable speed circulator includes an internal check valve for multiple unit/ shared loop installations.
- Optional SecureStart™ can expand the life of your unit by reducing start up current (just 30% of normal amps) and protect the compressor from potentially damaging low-voltage sags.

- Standard cornerpost schreader ports provide access to source pressure drop across unit coaxial heat exchanger.
- The communicating DXM2.5 control board diagnostic and communicating thermostat features allow the home owner to tell the service technician what is wrong with the unit before the technician leaves the shop.
- The two-section swing-out and removable control box design provides wide-open service access to the compressor section. Multiple unit access panels allow technicians to access any side of the cabinet. Service friendly highly accessible high/low refrigerant pressure ports are located on a service bracket at the front of the unit. No other product / manufacturer in the geothermal segment offer this convenience.
- An innovative two-section electrical control box design that tucks the stationary line voltage components safely behind a swing-out low voltage control panel to provide clear service access through the front of the unit. The low voltage panel can even be quickly pulled off the hinges and removed. Harness connections make controller replacement a snap.
- 3/4" MPT condensate connection directly from condensate drain pan eliminates internal plastic drain tubing that is subject to clogging and avoids the need for a fitting that reduces the drain opening size.
- Diagnostic display of system inputs, outputs, and configuration settings at thermostat or Configuration/Diagnostic tool.
- Diagnostic display of system temperatures at thermostat (AVC99U**):
 - Geo source in and out
 - Compressor discharge line
 - LT1 and LT2 Refrigerant Line Temperature Sensors
 - Leaving air
 - Entering potable hot water to HWG
- Immediate manual control of all DXM2.5 outputs is available at the thermostat (AVC99U**) or Configuration/Diagnostic tool (ACDU**) for rapid troubleshooting.
- Expansion tank eliminates "flat loop" callbacks by working to maintain steady loop pressure.
- Brass swivel geo and hot water connections for quick connection and elimination of wrenches or sealants during installation.
- Intelligent fault retry with history retention.
- Two configurable auxiliary relays for low voltage control of accessories.
- UPS (Unit Performance Sentinel) provides early warning of inefficient operation.
- Optional service disconnect switch located in the front panel for easy service access.

Factory Quality & Industry Certifications

All units are built and factory run tested on our Integrated Process Control Assembly System (IPCS). The IPCS is a unique state of the art manufacturing system that is designed to assure quality of the highest standards of any manufacturer in the water-source industry. Our IPCS system:

- Verifies that the correct components are being assembled.
- Automatically performs special leak tests on all joints
- Conducts pressure tests
- Performs detailed run test
- Automatically disables packaging for a "failed" unit
- Creates computer database for future service analysis and diagnostics from run test results
- All refrigerant brazing is done in a nitrogen atmosphere
- All units are deep evacuated to less than 100 microns prior to refrigerant charging

Tranquility® 30 Design Features

- All joints are both helium and halogen leak tested to ensure annual leak rate of less than 1/4 ounce
- AHRI/ASHRAE/ANSI/ISO 13256-1 certified.
- ETL listed.
- US EPA "Energy Star" Tier 3 compliant.

Advanced Controls

iGate® 2 communicating control provides advanced unit functionality and comprehensive configuration, monitoring and diagnostic capabilities through digital communication links with the variable-speed fan motor, variable-speed source pump (or modulating valve) and communicating thermostat or Configuration/Diagnostic tool.

- 7 temperature sensor inputs for system protection and control
- Anti-short cycle and over/under voltage protection
- High pressure, loss of charge, and condensate overflow protection
- LED fault and status indication at controller
- Service tool port for optional setup and diagnostics at unit

Factory Options and Accessories

- Hot water generator with internally mounted pump and advanced logic control
- SecureStart module can expand the life of the unit by reducing start up current and protecting the compressor from low-voltage conditions.
- Electrical Service Disconnect Switch located on the unit front panel for ease of service.

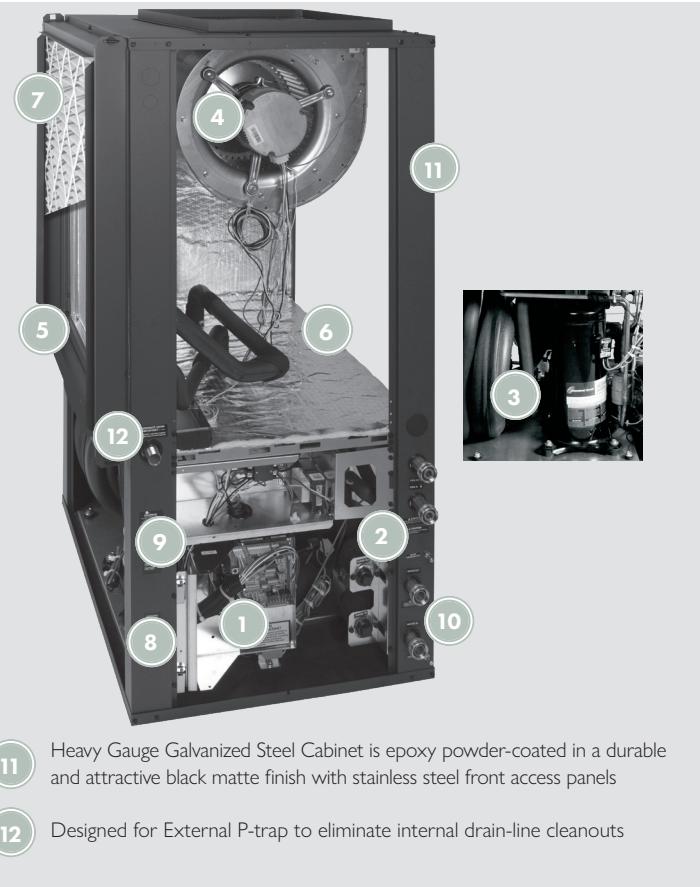

- 1** Exclusive iGate® 2 Two-Way Communicating Control to configure, monitor and diagnose AT THERMOSTAT
- 2** Optional vFlow® Internal Variable Water Flow System with Internal Flow Center or Internal Motorized Modulating Valve for optimized efficiency and reliability
- 3** Next generation Copeland™ Ultra-Tech™ Two-Stage Scroll Compressor with dual-level isolation for ultra-quiet and high-efficiency operation
- 4** Emerson UltraTech® Variable-Speed Communicating Fan Motor with soft start and constant CFM control
- 5** Tin-Plated Copper or all aluminum microchannel Air Coils to resist formicary corrosion
- 6** Foil-Faced Insulation in the blower section and fully insulated compressor section conform to ASHRAE 62 specifications
- 7** Two-inch high-efficiency MERV 11 Filter (standard) or EarthPure® Air Cleaner for high quality indoor air
- 8** Two-Section Swing-out Control Box design provides wide-open service access
- 9** Refrigerant Schrader Ports Located on bracket at the front access panel for easy service access
- 10** Water Schrader Ports located on corner post to easily read pressure drop across water heat exchanger for easy troubleshooting

Field Installed Accessories

- iGate® 2 Communicating, Programmable Thermostat (AWC99U**)
- Auxiliary Electric Heater
- Earthpure® Polarized Media Electric Air Cleaner
- Configuration / Diagnostic Tool (ACDU**)
- Outdoor/Remote Temperature Sensor (AST008)
- Anti Scald Valve (AVAS4)
- Secure Start Compressor Soft Start Kit (13B0045N01)
- Unit Vibration Isolation Pad
- Unit Stand
- Secondary Drain Pan (Horizontal Units)

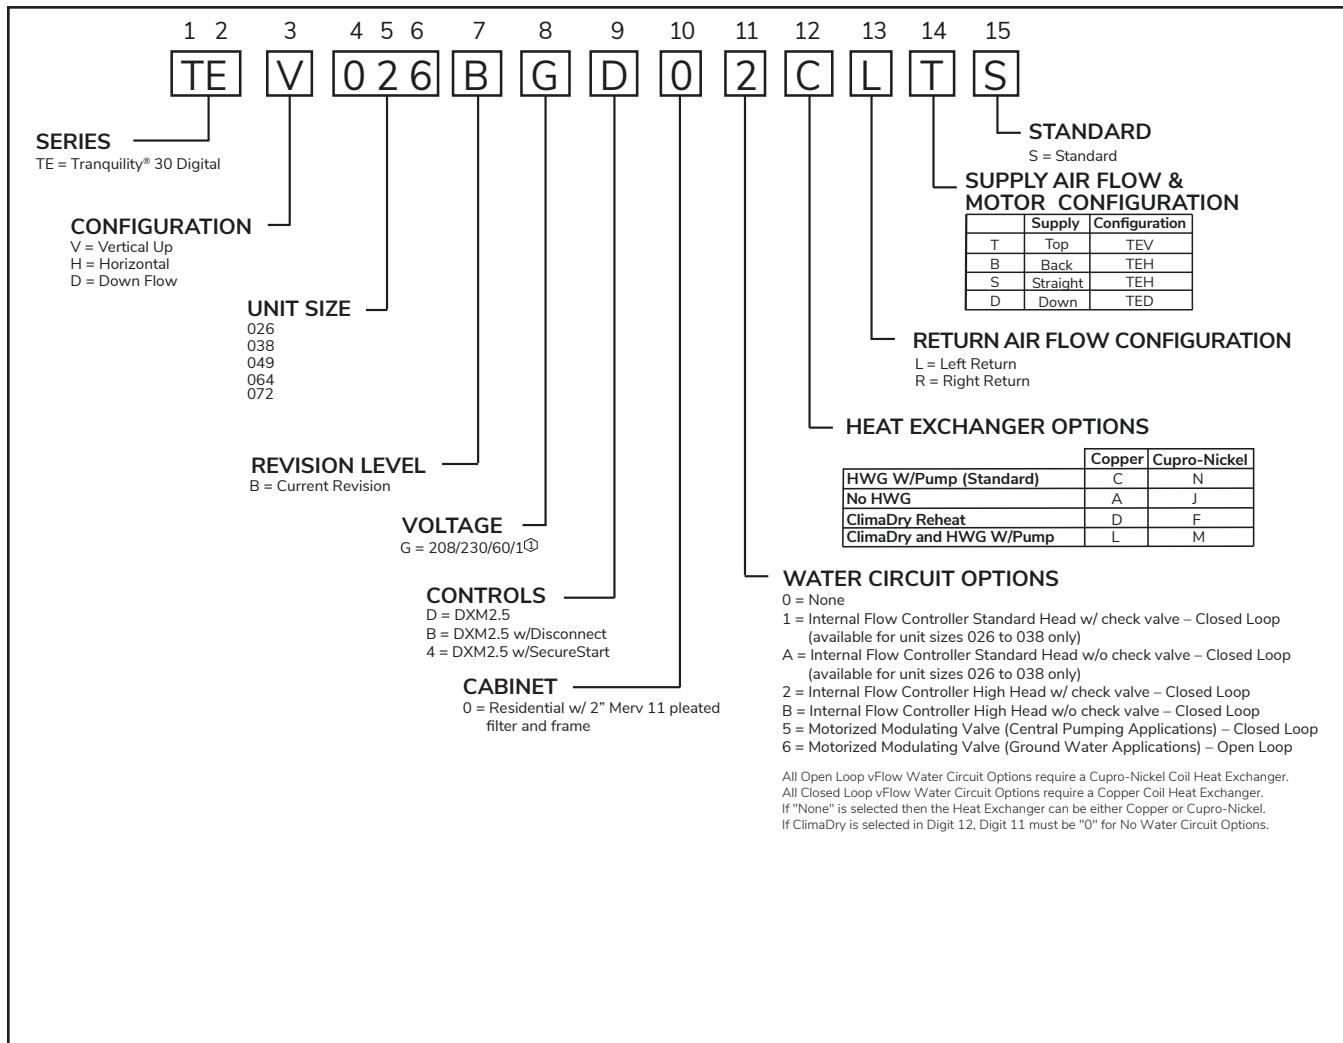

Warranty

- ClimateMaster residential class heat pumps are backed by a ten-year limited warranty on all unit parts, including the following accessories when installed with ClimateMaster units: Flow Controllers, Thermostats & Electric Heaters.
- ClimateMaster goes even further to back up its commitment to quality by including a service labor allowance for the first five years on unit parts and thermostats, auxiliary electric heaters and geothermal pumping modules.
- The Optional Extended Factory Service Labor Allowance Warranty offers additional length of term protection to the consumer by offsetting service labor costs for 10 years.

About AHRI/ISO/ASHRAE 13256-1

AHRI/ASHRAE/ISO 13256-1 (Air-Conditioning and Refrigeration Institute/American Society of Heating, Refrigerating and Air Conditioning Engineers/International Standards Organization) is a certification standard for water-source heat pumps used in the following applications:

- WLHP (Water Loop Heat Pump – Boiler/Tower)
- GWHP (Ground Water Heat Pump – Open Loop)
- GLHP (Ground Loop Heat Pump – Geothermal)

The directory at <http://www.ahrinet.org/> is constantly being updated and immediately available on the Internet.

Water and air temperatures used in AHRI certification standards are shown below.

Test Condition Comparison Table

	WLHP	GWHP	GLHP
Cooling Entering Air Temperature - DB/WB °F [°C] Entering Water Temperature - °F [°C] Fluid Flow Rate	80.6/66.2 [27/19] 86 [30] *	80.6/66.2 [27/19] 59 [15] *	80.6/66.2 [27/19] 77 [25] *
Heating Entering Air Temperature - DB/WB °F [°C] Entering Water Temperature - °F [°C] Fluid Flow Rate	68 [20] 68 [20] *	68 [20] 50 [10] *	68 [20] 32 [0] *

*Flow rate is specified by the manufacturer

Data certified by AHRI include heating/cooling capacities, EER (Energy Efficiency Ratio – Btuh per Watt) and COP (Btuh per Btuh) at the various conditions shown above. Pump power correction is calculated to adjust efficiencies for pumping Watts. Fan power is corrected to zero external static pressure using the equation below. The nominal airflow is rated at a specific external static pressure.

- Fan Power Correction = $(\text{cfm} \times 0.472) \times (\text{esp} \times 249)/300$

Capacities and efficiencies are calculated using the following equations:

- ISO Cooling Capacity = Cooling Capacity (Btuh) + [Fan Power Correction (Watts) $\times 3.412$]
- ISO EER Efficiency (Btuh/W) = $\text{ISO Cooling Capacity (Btuh)}/[\text{Power Input (Watts)} - \text{Fan Power Correction (Watts)} + \text{Pump Power Correction (Watts)}]$
- ISO Heating Capacity = Heating Capacity (Btuh) - [Fan Power Correction (Watts) $\times 3.412$]
- ISO COP Efficiency (Btuh/Btuh) = $\text{ISO Heating Capacity (Btuh)} \times 3.412/[\text{Power Input (Watts)} - \text{Fan Power Correction (Watts)} + \text{Pump Power Correction (Watts)}]$

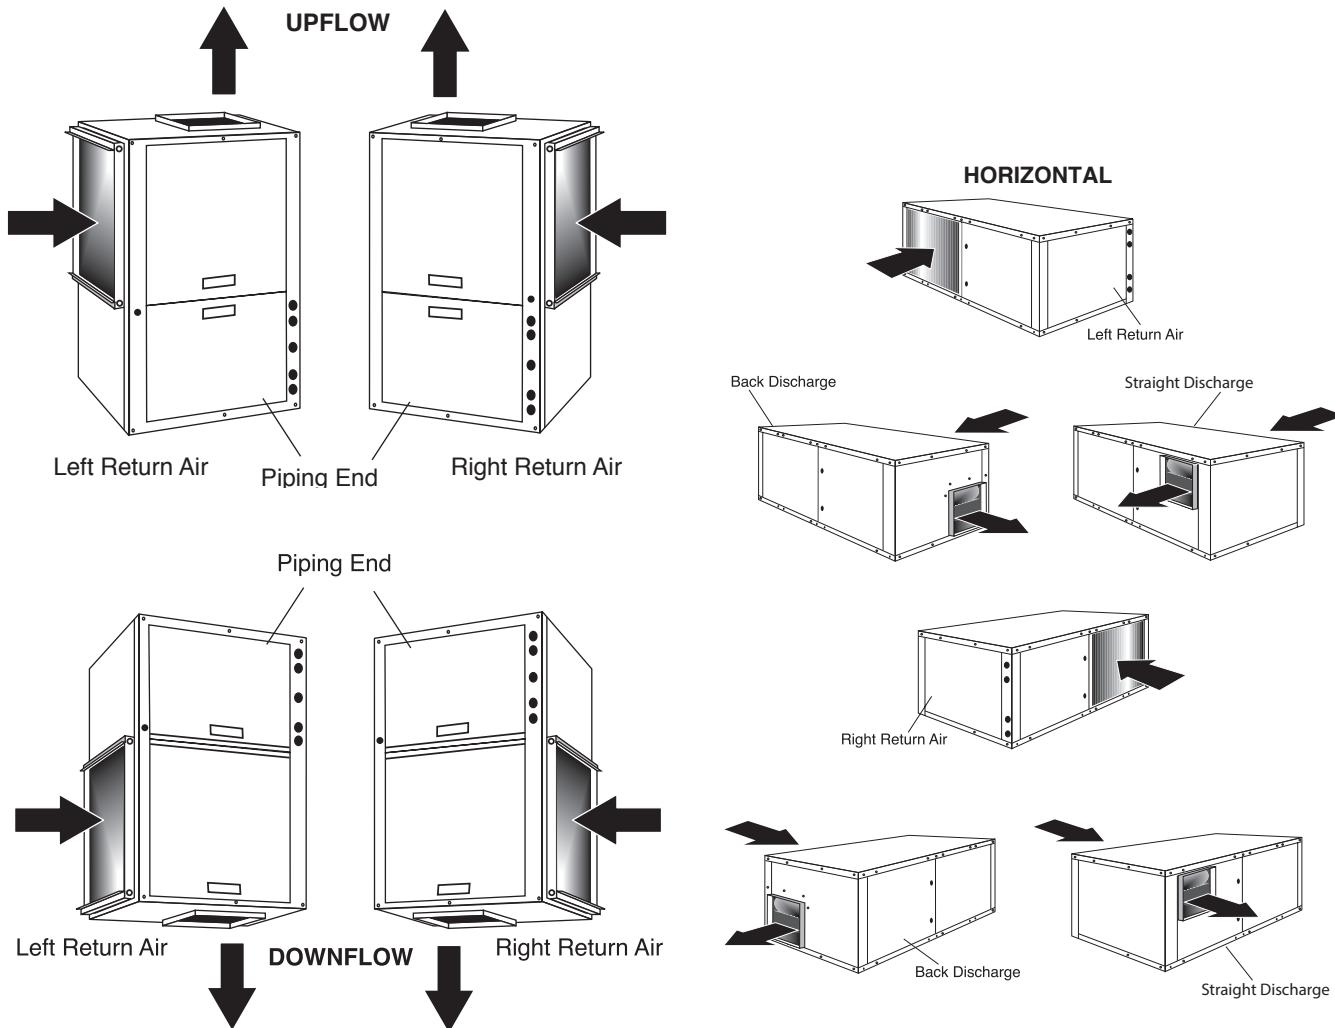

Tranquility® 30 Digital (TE) Series

Reference Calculations & Legend

Heating	Cooling
$LWT = EWT - \frac{HE}{GPM \times 500}$	$LWT = EWT + \frac{HR}{GPM \times 500}$
$LAT = EAT + \frac{HC}{CFM \times 1.08}$	$LC = TC - SC$ $LAT (DB) = EAT (DB) - \frac{SC}{CFM \times 1.08}$ $S/T = \frac{SC}{TC}$

Hot Water Generator capacities (HWC) are based on potable water flow rate of 0.4 gpm per nominal equipment ton and 90°F entering potable water temperature.

CFM	= airflow, cubic feet/minute	HE	= total heat of extraction, Mbtuh
EWT	= entering water temperature, °F	HWC	= Hot Water Generator (desuperheater) capacity, Mbtuh
GPM	= water flow in US gallons/minute	WPD	= Water coil pressure drop (psi & ft hd)
EAT	= entering air temperature, Fahrenheit (dry bulb/wet bulb)	EER	= Energy Efficiency Ratio = BTU output/Watt input
HC	= air heating capacity, Mbtuh	COP	= Coefficient of Performance = BTU output/BTU input
TC	= total cooling capacity, Mbtuh	LWT	= leaving water temperature, °F
SC	= sensible cooling capacity, Mbtuh	LAT	= leaving air temperature, °F
KW	= total power unit input, KiloWatts	LC	= latent cooling capacity, Mbtuh
HR	= total heat of rejection, Mbtuh	S/T	= sensible to total cooling ratio

Tranquility® 30 Digital (TE) Series

Performance Data Selection Notes - vFlow® Models

Operation in Shaded Area: Closed Loop Application

For operation in the shaded area, appropriate levels of a proper antifreeze should be used in systems with leaving water temperatures of 40°F or below and the JW3 jumper should be clipped. This is due to the potential of the refrigerant temperature being as low as 32°F [0°C] with 40°F [4.4°C] LWT, which may lead to a nuisance cutout due to the activation of the Low Temperature Protection. JW3 should never be clipped for systems without antifreeze.

Open Loop Application:

For operation in shaded area (below 40°F LWT) in open loop applications, ΔT (on DXM2.5) should be set such that the LWT ($= EWT - \Delta T$) doesn't drop below 40°F. JW3 should NEVER be clipped for systems without antifreeze.

Performance Data Selection Notes - Models without vFlow®

For operation in the shaded area when water is used in lieu of an antifreeze solution, the LWT (Leaving Water Temperature) must be calculated. Flow must be maintained to a level such that the LWT is maintained above 40°F [4.4°C] when the JW3 jumper is not clipped (see example below). Otherwise, appropriate levels of a proper antifreeze solution should be used in systems with leaving water temperatures of 40°F [4.4°C] or below and the JW3 jumper should be clipped. This is due to the potential of the refrigerant temperature being as low as 32°F [0°C] with 40°F [4.4°C] LWT, which may lead to a nuisance cutout due to the activation of the Low Temperature Protection. JW3 should never be clipped for standard range equipment or systems without antifreeze.

Example:

At 50°F EWT (Entering Water Temperature) and 1.5 gpm/ton, a 3 ton unit has a HE of 22,500 Btuh. To calculate LWT, rearrange the formula for HE as follows:

HE = TD x GPM x 500, where HE = Heat of Extraction (Btuh); TD = temperature difference (EWT - LWT) and GPM = U.S. Gallons per Minute.

$$TD = HE / (GPM \times 500)$$

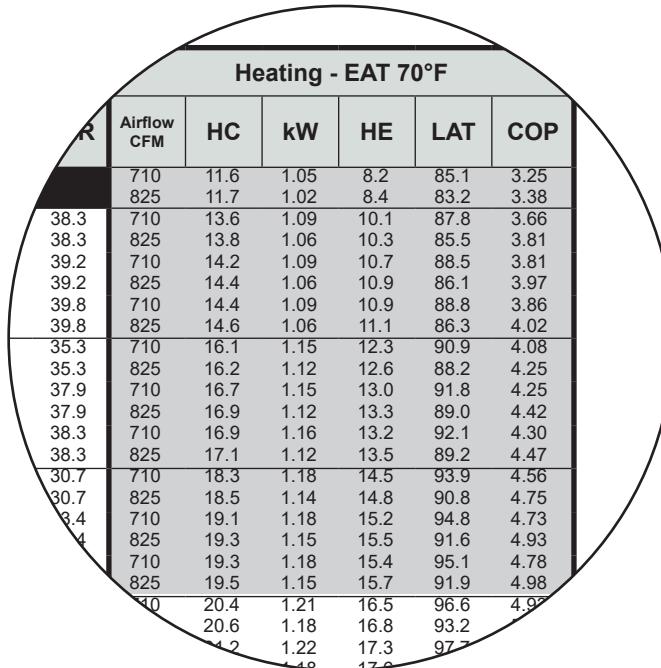

$$TD = 22,500 / (4.5 \times 500)$$

$$TD = 10^{\circ}\text{F}$$

$$LWT = EWT - TD$$

$$LWT = 50 - 10 = 40^{\circ}\text{F}$$

In this example, as long as the EWT does not fall below 50°F, the system will operate as designed. For EWTs below 50°F, higher flow rates will be required (open loop systems, for example, require at least 2 gpm/ton when EWT is below 50°F).

Performance Data — Tranquility® 30 Model 026 - Part Load, with vFlow®

Performance capacities shown in thousands of Btu/h

													Antifreeze use recommended in this range. Also Clip JW3 on DXM2.5 board.

Tranquility® 30 Digital (TE) Series

Performance Data — Tranquility® 30 Model 026 - Full Load, with vFlow®

Performance capacities shown in thousands of Btu/h

												Antifreeze use recommended in this range. Also Clip JW3 on DXM2.5 board.											
EWT °F	Cooling - EAT 80/67 °F										Heating - EAT 70°F

Interpolation is permissible, extrapolation is not. All performance data is based on the lower voltage of dual voltage units.

Performance stated is at the rated power supply, performance may vary as the power supply varies from the rated.

Table is with entering air of 80°F DB and 67°F WB in cooling, and 70°F DB in heating.

AHRI/ISO certified conditions are 80.6°F DB and 66.2°F WB in cooling and 68.6°F DB in heating.

Table does not reflect fan or pump power corrections for AHRI/ISO conditions.

See performance correction tables for operating conditions other than those listed above. See performance data selection notes for operation in the shaded areas.

Operation below 40°F EWT is based on a 15% methanol antifreeze solution.

Operation below 60°F EWT requires optional extended range insulated water and refrigerant circuits to avoid condensation within the unit cabinet.

Tranquility® 30 Digital (TE) Series

Performance Data – TE H/V/D 026 (Full Load), No vFlow®

950 CFM Nominal (Rated) Airflow Heating, 850 CFM Nominal (Rated) Airflow Cooling

Interpolation is permissible, extrapolation is not. All performance data is based on the lower voltage of dual voltage units.

Performance stated is at the rated power supply, performance may vary as the power supply varies from the rated.

Table is with entering air of 80°F DB and 67°F WB in cooling, and 70°F DB in heating.

AHRI/ISO certified conditions are 80.6°F DB and 66.2°F WB in cooling and 68.6°F DB in heating.

Table does not reflect fan or pump power corrections for AHRI/ISO conditions.

Tranquility® 30 Digital (TE) Series

Performance Data – TE H/V/D 038 (Full Load), No vFlow®

1250 CFM Nominal (Rated) Airflow Heating, 1250 CFM Nominal (Rated) Airflow Cooling

Performance capacities shown in thousands of Btuh

Interpolation is permissible, extrapolation is not. All performance data is based on the lower voltage of dual voltage units.
 Performance stated is at the rated power supply, performance may vary as the power supply varies from the rated.
 Table is with entering air of 80°F DB and 67°F WB in cooling, and 70°F DB in heating.
 AHR/ISO certified conditions are 80.6°F DB and 66.2°F WB in cooling and 68°F DB in heating.</p

Performance Data – TE H/V/D 064 (Part Load), No vFlow®

1650 CFM Nominal (Rated) Airflow Heating, 1500 CFM Nominal (Rated) Airflow Cooling

Performance capacities shown in thousands of Btu/h

Interpolation is permissible, extrapolation is not. All performance data is based on the lower voltage of dual voltage units.

Performance stated is at the rated power supply, performance may vary as the power supply varies from the rated.

Table is with entering air of 80°F DB and 67°F WB in cooling, and 70°F DB in heating.

Tranquility® 30 Digital (TE) Series

Interpolation is permissible, extrapolation is not. All performance data is based on the lower voltage of dual voltage units.

Performance stated is at the rated power supply, performance may vary as the power supply varies from the rated.

Table is with entering air of 8

Tranquility® 30 Digital (TE) Series

Performance Data – TE H/V/D 072 (Full Load), No vFlow®

2050 CFM Nominal (Rated) Airflow Heating, 1850 CFM Nominal (Rated) Airflow Cooling

Performance capacities shown in thousands of Btuh

ECM Blower Control

The ECM fan is controlled directly by the DXM2.5 control board that converts thermostat inputs and CFM settings to signals used by the ECM motor controller. To take full advantage of the ECM motor features, a communicating multi-stage thermostat should be used (AWC99U**).

The DXM2.5 control maintains a selectable operating airflow [CFM] for each heat pump operating mode. For each operating mode there are maximum and minimum airflow limits. See the ECM Blower Performance tables for the maximum, minimum, and default operating airflows.

Airflow levels are selected using the configuration menus of a communicating thermostat (AWC99U**) or diagnostic tool (ACDU**). The configuration menus allow the installer to independently select and adjust the operating airflow for each of the operating modes. Air flow can be selected in 25 CFM increments within the minimum and maximum limits shown in the ECM Blower Performance Table. The blower operating modes include:

- First Stage Cooling (Y1 & O)
- Second Stage Cooling (Y1, Y2, & O)
- First Stage Cooling in Dehumidification Mode (Y1, O, & Dehumid)
- Second Stage Cooling in Dehumidification Mode (Y1, Y2, O, & Dehumid)
- First Stage Heating (Y1)
- Second Stage Heating (Y1 & Y2)
- Third Stage (Auxiliary) Heating (Y1, Y2, & W)
- Emergency Heating (W with no Y1 or Y2)
- Fan (G with no Y1, Y2, or W)

It is highly recommended that AWC99U** or ACDU** be used to set dehumidification mode electronically. Dehumidification can NOT be selected when using a non-communicating thermostat with a vFlow® unit with Internal Flow Controller (pump). For dehumidification settings on other units using the non-communicating stat, refer to DXM2.5 AOM (part #97B0003N15).

The ECM motor includes “soft start” and “ramp down” features. The soft start feature is a gentle increase of motor rpm at blower start up. This creates a much quieter blower start cycle.

The ramp down feature allows the blower to slowly decrease rpm to a full stop at the end of each blower cycle. This creates a much quieter end to each blower cycle and adds overall unit efficiency.

The ramp down feature is eliminated during an ESD (Emergency Shut Down) situation. When the DXM2.5 ESD input is activated, the blower and all other control outputs are immediately de-activated.

The ramp down feature (also known as the heating or cooling “Off Delay”) is field selectable by the installer. The allowable range is 0 to 255 seconds.

Airflow is controlled within 5% up to the Max ESP shown with wet coil

ClimaDry® – Benefits and Application

ClimaDry® Modulating Reheat

ClimateMaster's patented ClimaDry® Dehumidification is an innovative means of providing modulating reheat without the complication of refrigeration controls. ClimaDry is hot gas generated reheat, which utilizes one of the biggest advantages of a Water-Source Heat Pump (WSHP), the transfer of energy through the water piping system. ClimaDry simply diverts condenser water through a water-to-air coil that is placed after the evaporator coil. If condenser water is not warm enough, the internal "run-around" loop increases the water temperature with each pass through the condenser coil (see figure 1, below).

ClimaDry® Benefits

ClimaDry® is like no other reheat option on the market. Proportional reheat is controlled to the desired leaving air temperature setpoint (factory setpoint of 72°F, 22°C), no matter what the water loop temperature is. Since dehumidification operation will occur under less than full load cooling conditions a good percentage of the time, it is important to have a reheat function that provides 100% reheat in the spring and fall when the water loop is cool. Competitors without ClimaDry® typically use an on/off (non-modulating) refrigeration based reheat circuit, typically referred to as "Hot gas reheat" (HGR). HGR needs higher condensing temperatures to work well, typically 85°F [29°C] entering water temperature (EWT).

With HGR, cooler water temperatures produce cooler supply air temperatures, which could overcool the space, requiring additional space heating from another source or a special auto-change-over relay to allow the unit to switch back and forth between reheat and heating. Rarely does HGR provide 100% reheat, like ClimaDry. ClimaDry has a simple and easy to troubleshoot refrigerant circuit. No switching valves or hard to diagnose leaky check valves are utilized. No unusual refrigerant pressures occur during the reheat mode. The ClimaDry refrigerant circuit is like every other ClimateMaster unit (without reheat), so everything the technician already knows applies to troubleshooting the ClimaDry refrigeration circuit. Plus, the water loop portion of the ClimaDry option is easy to understand and diagnose.

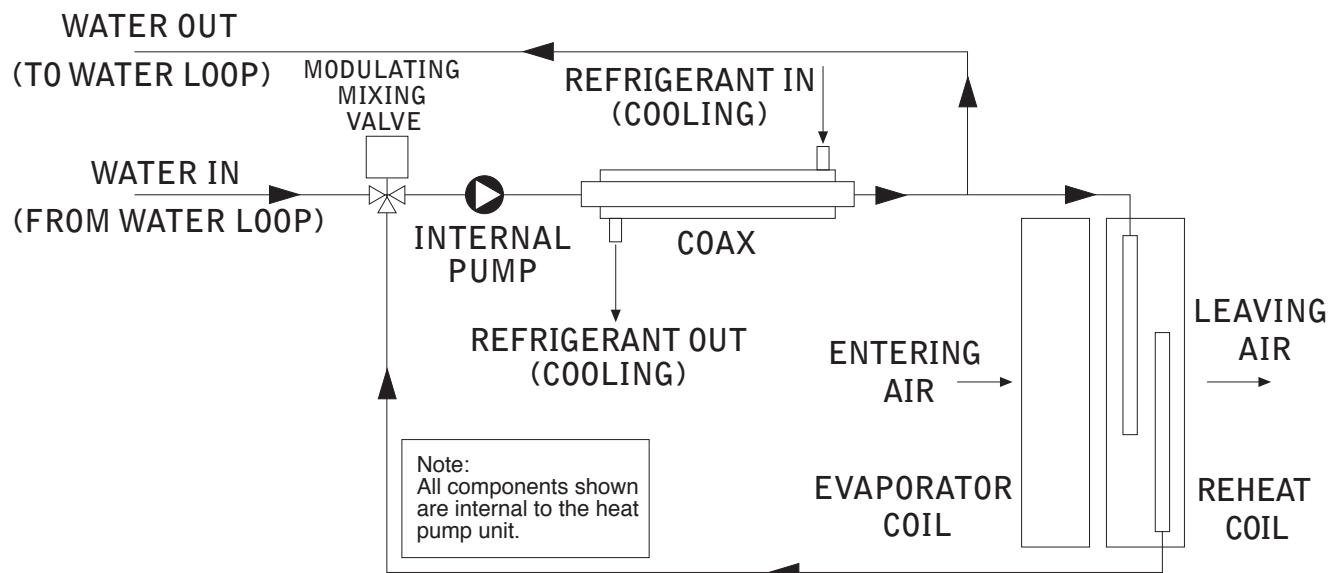

ClimaDry® Applications

ClimaDry® can be applied to a number of common applications, such as:

- Classrooms.
 - Condominiums.
 - Apartments.
 - Computer rooms.
 - Spaces with high latent loads like auditoriums, theaters, convention centers, etc.
 - Most applications where humidity is a problem.
- (Note: ClimaDry® is not for use in high fraction outdoor air applications or in applications with corrosive atmospheres, such as pool rooms.)

With the ClimaDry®, return air from the space is cooled by the air-to-refrigerant (evaporator) coil, and then reheated by the water-to-air (reheat) coil to dehumidify the air, but maintain the same space temperature (thus operating as a dehumidifier).

Figure 1: ClimaDry® Schematic

ClimaDry® – Benefits and Application

The moisture removal capability of the heat pump is determined by the unit's latent capacity rating. Latent capacity equals Total capacity minus Sensible capacity. Using unit performance data from submittals (climatemaster.com) select the correct model, use your maximum entering water temperature (EWT) and flow rate to select TC and SC. For example, at 80° F [26.7° C] EWT and 6.8 GPM, the moisture removal capability (latent capacity) of a ClimateMaster unit is 11.8 Mbtuh [3.5 kW] as shown below.

Dividing the latent capacity by 1,069 BTU/LB of water vapor at 80° F DB and 67° F WB [26.7° C DB and 19.4° C WB] moist air enthalpy, converts the amount of moisture removal to pounds per hour (multiply pounds per hour by 0.4536 to obtain kg/hr). Calculations are shown below.

Most ClimateMaster water source heat pumps have a sensible-to-total (S/T) ratio of 0.72 to 0.82. Therefore, approximately, 25% of the cooling capacity is dedicated to latent cooling capacity (moisture removal). When selecting a unit with ClimaDry, the space sensible and latent loads should be calculated. If the unit will be used for space cooling, a unit with at least enough capacity to satisfy the building sensible load should be selected. If the latent cooling load is not satisfied by the selection, a larger unit with enough latent capacity will be required. If the unit will be used for dehumidification purposes only, the latent capacity is the only consideration necessary. In this case, sensible load is immaterial.

Example Performance

$$LC = TC - SC = 37.2 - 25.4 = 11.8 \text{ Mbtuh}$$

$$11,800 \text{ Btuh} \div 1069 = 11.0 \text{ lbs/hr}$$

Dividing the latent capacity by 1,069 BTU/LB of water vapor at 80° F DB and 67° F WB [26.7° C DB and 19.4° C WB] moist air enthalpy, converts the amount of moisture removal to pounds per hour (multiply pounds per hour by 0.4536 to obtain kg/hr).

ClimaDry® – Sequence of Operation

ClimaDry® Sequence of Operation

A heat pump equipped with ClimaDry® can operate in three modes; cooling, cooling with reheat (dehumidification), and heating. The cooling/heating modes are like any other ClimateMaster VSHP. The reversing valve ("O" signal) is energized in cooling, along with the compressor contactor(s) and blower relay. In the heating mode the reversing valve is de-energized. Almost any thermostat will activate the heat pump in heating or cooling modes. The DXM2 microprocessor board, which is required with the ClimaDry option, will accept either heat pump (Y,O) thermostats or non-heat pump (Y,W) thermostats. The reheat mode requires either a separate humidistat/dehumidistat or a thermostat that has an integrated dehumidification function for activation. The DXM2 board is configured to work with either a humidistat or dehumidistat input to terminal "H". Upon receiving an "H" input, the DXM2 board will activate the cooling mode and engage reheat. There are four operational inputs for single stage units and six operational inputs for dual stage units:

- Fan Only
- 1st Stage Cooling
- 2nd Stage Cooling
- 1st Stage Heating
- 2nd Stage Heating
- Reheat Mode

Fan Only: A (G) call from the thermostat to the (G) terminal of the DXM2 control board will bring the unit on in fan only mode.

1st Stage Heating: A simultaneous call from (G) and (Y1) to the (G) and (Y1) terminals of the DXM2 control board will bring the unit on in 1st Stage Heating.

1st Stage Cooling: A simultaneous call from (G), (Y1), (Y2), and (O) to the (G), (Y1), (Y2), (O/W2) terminals of the DXM2 control board will bring the unit on in 2nd Stage Cooling. When the call is satisfied at the thermostat, the unit will continue to run in the 1st Stage Cooling until the 1st Stage Cooling call is removed or satisfied, shutting down the unit.

2nd Stage Cooling: A simultaneous call from (G), (Y1), and (O) to the (G), (Y1), (O/W2) terminals of the DXM2 control board will bring the unit on in 1st Stage Cooling.

1st Stage Heating: A simultaneous call from (G) and (Y1) to the (G) and (Y1) terminals of the DXM2 control board will bring the unit on in 1st stage Heating.

2nd Stage Heating: A simultaneous call from (G), (Y1), and (Y2) to the (G), (Y1), and (Y2) terminals of the DXM2 control board will bring the unit on in 2nd Stage Heating. When the call is satisfied at the thermostat the unit will continue to run in 1st Stage Heating until the call is removed or satisfied, shutting down the unit. **NOTE: Not all units have two-stage heating functionality.**

Table 2: Humidistat/Dehumidistat Logic and DXM2.5 (2.1, 2.2., 2.3) DIP Settings

Sensor	2.1	2.2	2.3	Logic	Reheat (ON) - H	Reheat (OFF) - H
Humidistat	OFF	OFF	OFF	Reverse	0 VAC	24 VAC
Dehumidistat	OFF	ON	OFF	Standard	24 VAC	0 VAC

Table 3: ClimaDry® Operating Modes

Mode	Input					Output				
	O	G	Y1	Y2 ³	H	O	G	Y1	Y2 ³	Reheat
No Demand	ON/OFF	OFF	OFF	OFF	OFF	ON/OFF	OFF	OFF	OFF	OFF
Fan Only	ON/OFF	ON	OFF	OFF	OFF	ON/OFF	ON	OFF	OFF	OFF
Cooling 1st Stage	ON	ON	ON	OFF	OFF	ON	ON	ON	OFF	OFF
Cooling 2nd Stage	ON	ON	ON	ON	OFF	ON	ON	ON	ON	OFF
Cooling & Dehumidistat¹	ON	ON	ON	ON/OFF	ON	ON	ON	ON	ON/OFF	OFF
Dehumidistat Only	ON/OFF	OFF	OFF	OFF	ON	ON	ON	ON	ON	ON
Heating 1st Stage	OFF	ON	ON	OFF	OFF	OFF	ON	ON	OFF	OFF
Heating 2nd Stage	OFF	ON	ON	ON	OFF	OFF	ON	ON	ON	OFF
Heating & Dehumidistat²	OFF	ON	ON	ON/OFF	ON	OFF	ON	ON	ON/OFF	OFF

¹ Cooling input takes priority over dehumidify input.

² DXM2.5 is programmed to ignore the H demand when the unit is in heating mode.

³ N/A for single stage units; Full load operation for dual capacity units.

⁴ ON/OFF = Either ON or OFF.

ClimaDry® – Sequence of Operation

Reheat Mode: A call from the Humidistat/Dehumidistat to the (H) terminal of the DXM2 control board will bring the unit on in Reheat Mode if there is no call for cooling at the thermostat. When the Humidistat/Dehumidification call is removed or satisfied the unit will shut down. **NOTE: Cooling always overrides**

Reheat Mode. In the Cooling mode, the unit cools and dehumidifies. If the cooling thermostat is satisfied but there is still a call for dehumidification, the unit will continue to operate in Reheat Mode.

Note: Care must be taken when using a humidistat to operate ClimaDry®. When the DIP switch on the DXM2 controller is set for ‘humidistat’ it reverses the control logic so that an “open” control circuit initiates a ClimaDry run cycle. If a humidistat is not connected, or if a manual switch on the humidistat is set to “off”, ClimaDry will see the open circuit and call for dehumidification.

ClimaDry® Component Functions

The ClimaDry® option consists of the following components:

Motorized Valve/Proportional Controller

Supply Air Sensor

Loop Pump

Hydronic Coil

Low Air Temperature Safety

The Proportional Controller operates on 24 VAC power supply and automatically adjusts the water valve based upon the Supply Air Sensor. The Supply Air Sensor senses supply air temperature at the blower inlet providing the input signal necessary for the proportional control to drive the motorized valve during the reheat mode of operation. The Motorized Valve is a proportional actuator/three-way valve combination used to divert the condenser water from the coax to the hydronic reheat coil during the reheat mode of operation.

The proportional controller signals the motorized valve based on the supply air temperature of the supply air sensor.

The Loop Pump circulates condenser water through the hydronic reheat coil during the reheat mode of operation. In this application, the loop pump is only energized during the reheat mode of operation. The Hydronic Coil is utilized during the reheat mode of operation to reheat the air to the setpoint of the proportional controller. Condenser water is diverted by the motorized valve and pumped through the hydronic coil by the loop pump in proportion to the control setpoint. The amount of reheating is dependent on the setpoint and how far from setpoint the supply air temperature is. The factory setpoint is 72° F [22° C], generally considered “neutral” air.

ClimaDry® Application Considerations

The reheat coil adds a small amount of resistance to the air stream. Consult the submittal data or the Installation/Operation/Maintenance (I.O.M.) manual for the specific heat pump to review blower tables.

Unlike most hot gas reheat options, the ClimaDry® option will operate over a wide range of EWTs. Special flow regulation (water regulating valve) is not required for low EWT conditions.

Unit minimum entering air temperature while in the dehumidification, cooling, or continuous fan modes is **65°F DB/55°F WB**. Operation below this minimum may result in nuisance faults.

Water-source heat pumps with ClimaDry should not be used as make-up air units. These applications should use equipment specifically designed for make-up air.

Tranquility® 30 Digital (TE) Series

Accessories & Warranty

Accessories & Options

vFlow® Internal Variable Speed

Water-flow Control

ClimateMaster takes ease and speed of installation of geothermal heating and cooling systems to the next level with vFlow® variable water flow control. vFlow integrates water-flow control inside the unit AND matches the flow to the unit's operating requirements. Compared to conventional units that can just turn the water-flow on or off, Tranquility® 30 Digital varies the water-flow, which results in lower operating cost and longer system life. New 2-way communicating control (and communicating Pump / modulating valve) make vFlow a reality and is only available on ClimateMaster systems.

Hot Water Generator

The optional Hot Water Generator includes an insulated double wall vented heat reclaiming heat exchanger suitable for potable water. The heat exchanger coil and hot water circulating pump are factory mounted internal to the unit. The microprocessor Hot Water Generator control uses sensors to monitor the entering potable water temperature and the compressor discharge line temperature and allows the Hot Water Generator to operate any time conditions permit. The Hot Water Generator includes a pump sampling mode to sense the hot water storage temperature while the Hot Water Generator is inactive.

SecureStart™ Module can expand the life of the unit by reducing start up current and protecting the compressor from low-voltage conditions.

Electrical Service Disconnect Switch located on the unit front panel for ease of service.

Thermostat (field installed)

The AWC99U** communicating thermostat is a programmable multi-stage auto-changeover electronic digital thermostat. The AWC offers up to 3 heating and 2 cooling stages with precise temperature control. The AWC is capable of controlling heating and cooling stages using a differential or proportional integral control algorithm. Multiple system temperatures and data can be displayed. The AWC is an integral component in system configuration and diagnostics.

Auxiliary Heater (field installed)

An optional, internal, field-installed electric heater provides supplemental and/or emergency heat capability when used with the three stage heating thermostat. (Heater is externally mounted on horizontal units).

Hose Connection Kit (field installed)

An accessory hose kit includes 10' of 150psi 1" rubber hose with brass fittings equipped with service pressure/temperature ports for connection between the unit and Flow Controller.

Warranty Information

ClimateMaster residential class heat pumps are backed by a ten-year limited warranty on all unit parts, including the following accessories when installed with ClimateMaster units: Flow Controllers, Thermostats & Electric Heaters.

ClimateMaster goes even further to back up its commitment to quality by including a service labor allowance for the first five years on unit parts and thermostats, auxiliary electric heaters and geothermal pumping modules.

See ClimateMaster's 2010 Limited Express Residential Warranty Certificate RP851 for specific coverage and limitation.

The Optional Extended Factory Service Labor Allowance Warranty offers additional length of term protection to the consumer by offsetting service labor costs for 10 years.

To order this warranty, contact your ClimateMaster distributor. This coverage must be purchased within 90 days of unit installation. See Limited Express Extended Labor Warranty Certificate RP852 for details.

NOTES

Tranquility® 30 Digital (TE) Series

Revision History

Date	Page #	Description
27 Apr. 23	All	Transitioned from DXM2 to DXM2.5 unit controls. Introduced new Wi-Fi cloud connected color touch screen communicating thermostat
11 Nov. 22	Various	Added ClimaDry Reheat
20 May, 21	41	Updated Dimensions for "O" and "P"
24 Aug, 20	49	Updated warranties
8 Nov. 19	5	Removed no flow center graphic
29 Oct. 19	6, 10	Decoder and pump curve updates
17 Sept. 19	17	Updated EER and HR
23 Jan. 19	4,43	High Head Variable Pump update
21 Aug. 18	11	Update TE026
15 Nov. 17	3	Updated Energy Star logo
27 Jan. 17	Various	Removed Federal Tax Incentive reference
30 Mar. 16	8 & 9	Run test description
9 Feb, 16	52	Updated certification logos
17 Dec., 15	Various	Added "Optional" to vFlow
17 July, 15	29-31	Updated WPD data
11 Feb., 15	36, 43	Updated Max Pressure, Add External Pump to Electrical Data
23 Oct., 14	26-35	Performance Data Updated
02 Oct., 14	All	Updated for No vFlow® Option
28 July, 14	16-25	Updated Water Pressure Drop Data
14 July, 14	All	Updated to Rev. B
10 Aug., 12	27, 29, 32	'Located on Air Coil Side' Note Added to Drawing
8 May, 12	All	First Published
